## DUKKAN: IDEA STORE

Dukkan is a idea store. People can write their ideas here and look for comments, or they can write comments to ideas on the site. It provides market control before people materialize their ideas.

First, my project has a homepage, it just has the name of the web page. Then we have the “about us” section which tells us the main idea of the site. Then we have “add ideas” section. People can add their ideas to site in this chapter. Last, we have the “look for the ideas” chapter. People can look for comments for each ideas and comment for any idea.

I have used database in my project. I had to store the ideas and comments of people. So I have used Firebase. It wass a bit difficult at first. However, then I figured out it. Now anybody can add datas to my database.

Here, there are some picture of my web site:

The screenshot shows a registration form titled "FİKRİNİ DENE" in a light green header. The form is divided into two main sections: "Kişisel Bilgiler" (Personal Information) and "İletişim Bilgileri" (Contact Information). The "Kişisel Bilgiler" section includes input fields for "Adınız:" (Your Name), "Soyadınız:" (Your Surname), and "Yaşınız:" (Your Age). The "İletişim Bilgileri" section includes input fields for "E-postanız:" (Your Email), "Numaranız:" (Your Number), and "Fikriniz:" (Your Idea). Below the "Fikriniz:" field, there is a small text label "Çatışma Potansiyeli:" (Conflict Potential). To the right of the form, there is a vertical sidebar with a light gray background containing the following links: "Anasayfa" (Homepage), "Hakkımızda" (About Us), "Fikirlere Bak" (View Ideas), and "Kaynaklar" (Sources).
